22	Social Welfare	Planned Change Strategy in Human Service Organization	This course helps students utilize knowledge to implement planned changes with a comprehensive understanding of organizational technology development in humanitarian organizations. Students will be introduced to "thing technology" and "people technology." In this regard, students will learn about various strategies for human system change within humanitarian organizations, including: Empirical-Rational Strategy, Normative-Reeducative Strategy, and Power-Coercive Strategy. Additionally, students will develop their ability to analyze human behavior using several approaches from social sciences, particularly System Theory and System Model. Moreover, students will gain an understanding of key theories from two social science disciplines: Sociology (e.g., Exchange Theory and Symbolic Interaction), and Psychology (e.g., Psychodynamic Theory, Cognitive Theory, Behaviorism Theory, and Humanistic Theory). These theories will be used to analyze and critically assess the dynamics of humanitarian organizations.		✓			2	Odd
